PATENT APPLICATION  
DOCKET NO.: 200208999-2

LISTING OF THE CLAIMS

Pursuant to 37 C.F.R. §1.121, provided below is a listing of the claims of the present patent application.

1. (Currently Amended) A general purpose performance counter ("GPPC") connected to a bus carrying debug data, the GPPC comprising:

an AND/OR circuit connected to receive an events signal that comprises the debug data;

a counter circuit connected to receive from the AND/OR circuit an increment signal that, when activated, causes the counter circuit to increment a current count value; and

a compare circuit for activating a match/threshold signal to the AND/OR circuit responsive to a selected block of the debug data having a designated relationship to a compare value; [[,]]

wherein, when the AND/OR circuit is operating in OR mode,  
the AND/OR circuit activates the increment signal responsive to one or more selected bits of [[an]] the events signal being set  
and when the AND/OR circuit is operating in AND mode, the AND/OR

PATENT APPLICATION  
DOCKET NO.: 200208999-2

circuit activates the increment signal when all of the selected bits of the events signal are set.

2. (Original) The GPPC of claim 1 wherein the compare circuit comprises a match circuit for activating the match/threshold signal to the AND/OR circuit when the compare circuit is in match mode and the selected debug data block is equal to the compare value.

3. (Original) The GPPC of claim 1 wherein the compare circuit comprises a threshold circuit for activating the match/threshold signal to the AND/OR circuit when the compare circuit is in threshold mode and the selected debug data block is greater than or equal to the compare value.

PATENT APPLICATION  
DOCKET NO.: 200208999-2

4. (Original) The GPPC of claim 1 further comprising a select circuit connected to receive the debug data, the select circuit outputting to the compare circuit a selected block of the debug data identified by a value of a select control signal input thereto.

5. (Original) The GPPC of claim 4 further comprising a zero circuit connected to receive a portion of the selected debug data block from the select circuit, the zero circuit for zeroing out a selected number of most significant bits ("MSBs") of the portion of the selected debug data block input thereto.

6. (Original) The GPPC of claim 5 wherein the zeroed-out portion of the selected debug data block is input to the counter circuit and to the compare circuit.

Claims 7 and 8 are cancelled.

9. (Original) The GPPC of claim 1 wherein the selected bits of the events signal are selected using a composite mask.

10. (Original) The GPPC of claim 9 wherein the events signal comprises the debug data, the match/threshold signal, and a logic one and wherein the composite mask signal comprises a debug data mask, a threshold/match mask, and an accumulate bit.

11. (Original) The GPPC of claim 1 wherein the debug data comprises 80 bits.

12. (Original) The GPPC of claim 1 wherein the selected block comprises 16 bits and the debug data comprises eight 10-bit-block-aligned blocks.

PATENT APPLICATION  
DOCKET NO.: 200208999-2

13. (Original) The GPPC of claim 1 wherein the selected block comprises eight bits.

14. (Original) The GPPC of claim 1 wherein the counter circuit comprises a 48-bit counter.

15. (Original) The GPPC of claim 1 wherein, when the counter circuit is enabled, the counter circuit performs an operation selected from a group consisting of: holding a current count value, incrementing a current count value by one, adding a specified value to the current count value, clearing the current count value, and setting the count value to a specified value.

PATENT APPLICATION  
DOCKET NO.: 200208999-2

16. (Currently Amended) A general purpose performance counter ("GPPC") connected to a bus carrying debug data, the GPPC comprising:

an AND/OR circuit connected to receive an events signal that comprises a match/threshold signal and the debug data;

a counter circuit connected to receive from the AND/OR circuit an increment signal that, when activated while the counter circuit is enabled, causes the counter circuit to increment a count value; and

a compare circuit for activating a match/threshold signal to the AND/OR circuit responsive to a selected block of the debug data having a designated relationship to a compare value,

wherein when the AND/OR circuit is in AND mode, the AND/OR circuit activates the increment signal if all of one or more selected bits of [[an]] the events signal are set and when the AND/OR circuit is in OR mode, the AND/OR circuit activates the increment signal if at least one of the selected bits of the events signal is set.

PATENT APPLICATION  
DOCKET NO.: 200208999-2

17. (Original) The GPPC of claim 16 wherein the compare circuit activates the match/threshold signal to the AND/OR circuit when the compare circuit is in match mode and the selected debug data block is equal to the compare value and activates the match/threshold signal to the AND/OR circuit when the compare circuit is in threshold mode and the selected debug data block is greater than or equal to the compare value.

18. (Original) The GPPC of claim 16 further comprising a select circuit connected to receive the debug data and output to the compare circuit a selected block of the debug data identified by a value of a select control signal input thereto.

PATENT APPLICATION  
DOCKET NO.: 200208999-2

19. (Original) The GPPC of claim 18 further comprising a zero circuit connected to receive a portion of the selected debug data block from the select circuit, the zero circuit for zeroing out a selected number of most significant bits ("MSBs") of the portion of the selected debug data block input thereto and providing the zeroed-out portion of the selected debug data block to the counter circuit and to the compare circuit.

20. (Original) The GPPC of claim 16 wherein the events signal comprises the debug data, the match/threshold signal, and a logic one.

21. (Original) The GPPC of claim 1 wherein the selected bits of the events signal are selected using a composite mask and wherein the composite mask signal comprises a debug data mask, a threshold/match mask, and an accumulate bit.

PATENT APPLICATION  
DOCKET NO.: 200208999-2

22. (Original) The GPPC of claim 16 wherein the debug data comprises 80 bits.

23. (Original) The GPPC of claim 16 wherein the selected block comprises 16 bits and the debug data comprises eight 10-bit-block-aligned blocks.

24. (Original) The GPPC of claim 16 wherein the selected block comprises eight bits.

25. (Original) The GPPC of claim 16 wherein the count value is a 48-bit value.

PATENT APPLICATION  
DOCKET NO.: 200208999-2

26. (Original) The GPPC of claim 16 wherein, when the counter circuit is enabled, the counter circuit performs an operation selected from a group consisting of: holding a current count value, incrementing a current count value by one, adding a specified value to the current count value, clearing the current count value, and setting the count value to a specified value.

PATENT APPLICATION  
DOCKET NO.: 200208999-2

27. (Currently Amended) A method of implementing a general purpose performance counter ("GPPC") connected to a bus carrying debug data, the method comprising:

providing an AND/OR circuit connected to receive an events signal that comprises the debug data;

providing a counter circuit connected to receive from the AND/OR circuit an increment signal that, when activated, causes the counter circuit to increment a count; and

providing a compare circuit for activating a match/threshold signal to the AND/OR circuit responsive to a selected block of the debug data having a designated relationship to a compare value; and

in a first mode, activating the increment signal by the AND/OR circuit responsive to one or more selected bits of [[an]] the events signal being set and in a second mode, activating the increment signal by the AND/OR circuit responsive to all of the one or more selected bits of the events signal being set.

PATENT APPLICATION  
DOCKET NO.: 200208999-2

28. (Original) The method of claim 27 further comprising activating the match/threshold signal by the compare circuit to the AND/OR circuit when the compare circuit is in match mode and the selected debug data block is equal to the compare value.

29. (Original) The method of claim 27 further comprising activating the match/threshold signal by the compare circuit to the AND/OR circuit when the compare circuit is in threshold mode and the selected debug data block is greater than or equal to the compare value.

30. (Original) The method of claim 27 further comprising:  
providing a select circuit connected to receive the debug data; and

outputting by the select circuit to the match/threshold circuit a selected block of the debug data identified by a value of a select control signal input thereto.

PATENT APPLICATION  
DOCKET NO.: 200208999-2

31. (Original) The method of claim 30 further comprising:  
providing a zero circuit connected to receive a portion of  
the selected debug data block from the select circuit; and  
the zero circuit zeroing out a selected number of most  
significant bits ("MSBs") of the portion of the selected debug  
data block input thereto.

32. (Original) The method of claim 31 further comprising  
inputting the zeroed-out portion of the selected debug data block  
to the counter circuit and to the compare circuit.

Claims 33 and 34 are cancelled.

35. (Original) The method of claim 27 further comprising  
selecting one or more bits of the events signal using a composite  
mask.

PATENT APPLICATION  
DOCKET NO.: 200208999-2

36. (Original) The method of claim 27 further comprising:  
enabling the counter circuit; and  
responsive to the counter circuit being enabled, the counter circuit performing an operation selected from a group consisting of: holding a current count value, incrementing a current count value by one, adding a specified value to the current count value, clearing the current count value, and setting the count value to a specified value.
